Air force model paper 2018 pdf

Air Force One has 4,000 square feet of interior floor space. A lot of it looks more like a hotel or executive office than a jet, except for seat belts on all chairs. The lowest level of the aircraft mostly serves as a cargo space. Most of the passenger room is in the middle level, and the upper level is largely dedicated to communication equipment. The president has living spaces on board, with its own bedroom, bathroom, workout room and office space. Most of the furniture on board was handmade by the main carpenters. The ad meets the staff in a large conference room, which doubles as a dining room for the president. Senior staff have their own office area, and the rest of the president's staff also have a space to work and relax. There is a separate area for journalists travelling with the President, and there is plenty of room for cabin crew to do their job. In general, Air Force One can comfortably carry 70 passengers and 26 crew members. If you enjoy rigorous training and mental stimulation, you may want to consider a career as an air force officer. As an officer, you are a defender of your nation with the skills and leadership qualities necessary to inspire your fellow soldiers. Read the tips below and learn how to represent America as an Air Force officer. There are a number of basic requirements that you must meet in order to be considered as an officer. You must be a U.S. citizen between the ages of 18 and 35. Pilots looking to be officers must apply for the position before their 29th birthday [Source: Military]. Only education those who are university and university degrees will consider this position as an officer in the Air Force. Although there are no areas of study required, law enforcement, medicine and engineering are all desirable key areas. In addition to post-secondary education, candidates must have been trained by the U.S. Air Force to be officers [Source: Military]. The staff of the physical qualifications are expected to be in excellent physical condition. She will be required to pass an Air Force fitness test and a full medical test before applying [Source: Military]. Test candidates must take and pass the Air Force Officer Qualification Test (AFOQT) before they can attend training. The test contains 12 components - including verbal measurement, mathematics, reading, science and flight information - that will assess whether you qualify to become an officer [Source: Air Force]. Training if you have passed physical exams and AFOQT, you will be asked to attend a 12-week officer training program run by the Air Force. This program is designed to test your dedication to office and train you to become an ideal officer for the U.S. Air Force [Source: Air Force], advertising most people have a general idea that the president's plane is Flying desk with all kinds of high-tech equipment. But there are two basic truths about Air Force One that the general public does not realize. Air Force One is not technically an airplane: it's simply the name of the radio call for any U.S. Air Force aircraft carrying the President of the United States. Once the President boarded an Air Force plane, that aircraft is referred to as Air Force One by the crew and all air traffic controllers, in order to avoid confusion with any other aircraft in the area. If the president is boarding an army plane, that plane is the first army, and whenever he is on board his specialized helicopter, that vehicle is Marine One. Civilians generally refer to the same physical aircraft as Air Force One, of course, and we will in this article as well. Today, there are actually two planes flying regularly under this classification - almost identical Boeing 747-200B aircraft. The AIRCRAFT is designated VC-25A, with tail numbers 28,000 and 29,000. The aircraft have the same general structure as a regular Boeing 747-200B, and similar capabilities. They are almost as tall as a six-storey building, and they're as long as the city block. Each has four GE CF6-80C2B1 ne-type waste engines, which provide 56,700 pounds of piece thrust. The maximum speed is between 630 and 700 mph and the maximum ceiling (how a plane can fly high) is 45,100 feet. Each aircraft carries 53,611 gallons of fuel and weighs 833,000 pounds fully loaded on a long-range mission. With a full tank, the plane can fly halfway around the world. Advertising is like a normal 747, and these planes have three levels. But inside, the plane does not resemble the commercial 747s at the lowest. In the next section, we'll look at the main components that have developed VC-25A aircraft apart from a normal jet. The plane, which carries the President of the United States, costs about \$2 billion to build the plane and more than \$200,000 to fly, according to federal spending records and published reports. Taxpayers pay for some or all of the cost of air force one regardless of whether the president's aircraft is used on official flights or for informal political purposes. The latest Two Force One aircraft, both 747-8, are being equipped by Boeing at a combined cost of about \$3.9 billion and were scheduled to fly in 2021. The White House determines whether air force One is used for official or political purposes. The Boeing 747 is often used for a combination of events. The cost per hour of more than \$200,000 from air force one covers everything from fuel, maintenance, engineering support, food and housing to pilots and crew and other operational costs, including the use of special communications equipment. In addition to the hourly cost of Air Force One, taxpayers cover the salaries of Secret Service employees and other aides who travel with the president. Sometimes, when there are more than 75 people traveling with the President, the federal government will use a second plane to accommodate it. Perhaps the most common example of the president's official use of Air Force One is traveling across the United States to explain and gain support for his administration's policies. Another travels abroad on official state-of-the-nation missions to meet with foreign leaders, such as President Barack Obama's 2010 trip on a Force One flight to India. When the president travels on official business, taxpayers cover all air force costs including food, housing and car hire, according to the Congressional Research Service. During official trips, taxpayers also cover travel costs for the President's family and direct staff. The most common example of a political flight on a Force One plane is when the president travels to a destination in his role not as commander-in-chief but as the de facto leader of his political party. This travel will be for fundraising campaigns, election rallies or party events. On the campaign trail, Obama and other presidential candidates also use armored buses costing more than \$1 million each. When Air Force One is used for political purposes, the president often pays for food, housing and travel. The president or his campaign would pay the equivalent of the ticket they would have paid if they had used a commercial airline, according to the Congressional Research Service. According to the Associated Press, although the president or his campaign does not pay for the full cost of Air Force One operation. They pay an amount based on the number of people on board. Taxpayers are still picking up the cost of Secret Service agents and Air Force One. The president, his family and his staff travel on Air Force One for a range of political purposes and officials, they usually reimburse taxpayers for the part of the trip that is considered a campaign. For example, if half of the president's trip is spent raising money for his election or the election of another official, he or his campaign will compensate taxpayers for half the cost of his travel, food and housing. There are grey areas, of course. When they travel and appear openly to defend their political positions, the difference between their official duties and their activities as leaders of their political party can be difficult to assess, according to the Congressional Research Service. As a result, the White House determines the nature of travel on a case-by-case basis, in an attempt to determine whether each trip, or part of a trip, is official or not by considering the nature of the event in question and the role of the individual concerned. Captain Audra Goldvos, weather officer of the 7th Air Force in Osan, South Korea, gave us a glimpse of everyday life in the Air Force. There are Air Force bases deployed throughout the United States, with many in Europe and Asia. Personnel are transferred every year or two depending on the needs of the Air Force (specific requests) Take into account, but much less priority is given in terms of the air force wants you). Goldfos was stationed at Tindall Air Force Base in Florida and Davis-Michigan Air Force Base in Arizona before being transferred to Korea. Photo Courtesy of Captain Audra Goldvos Captain Audra Goldvos, Air Force 7, standing in front of a U2 reconnaissance plane. The normal day starts very early, at 4:00, or 4:00 .m. This gives Goldfuss enough time to get into the uniform, polish her shoes and make sure her hair meets military regulations before he arrives at work at 0530. As weather officer, she is then informed of the previous 12 hours of weather throughout the theater where Osan Air Force Base is responsible: the Korean Peninsula, Japan, Hawaii, Guam and parts of China. From there, you go to the top secret briefing room, where they report to the general in charge of the base. Goldvos explains that the weather itself is not very secretive, but a high security clearance is required because of how it affects the aircraft we fly. Photo Courtesy of Captain Audra Goldvos Captain Audra Goldvos, pictured left, performs a re-recruitment ceremony for senior pilot Donna Whitney at Tyndall AFB, in Florida. Reflecting the Air Force's focus on continuing education, Goldvos spends a lot of time taking military education courses online and learning German (she knows her next mission will take her to an air force base in Germany). Al-Qaeda members are also participating in combat exercises. We pretend to be at war, so we train as if bombs are falling, guns are firing, and all hell breaks down. My job during these times is to give the weather to specific locations, help with staff recovery missions, and keep people informed of the weather throughout the theater. Life at an air force base gives air force officers and enlisted forces a variety of ways to spend their free time. Everything they need on the base itself, even just anything within walking distance. This includes basics such as grocery store and other shopping options, as well as exercise centers, cinemas, golf courses, restaurants, schools and churches. All air force personnel, as members of a United States military organization, are subject to the Uniform Military Justice Act. The dismissal of the Air Force can take a variety of forms, from honorable demobilization to military court, depending on the circumstances surrounding the dismissal. See how the army works to get a full explanation. Veterans and retired Air Force veterans are entitled to a range of benefits ranging from burial in state cemeteries to health insurance, life insurance, low-interest loans for mortgages or small businesses and veterans' health care. The full range of benefits available may depend on the nature of the veteran's separation - supervisory dismissal or retirements are usually necessary for all benefits. The search for answers to specific questions about the benefits of veterans begins in the National Archives: Sources Veterans information, assistance and benefits. For more information about the Air Force and related topics, see links on the following page. Ad
